

# Some facts about our situation...

Our "spaceship earth" is dying and we need your help saving it! But in case you missed it, here is some data:

## 417 parts per million

This is the concentration of carbon dioxide found in our atmosphere as of June 2020. It is the highest it has been in human history, and won't stop unless we do.

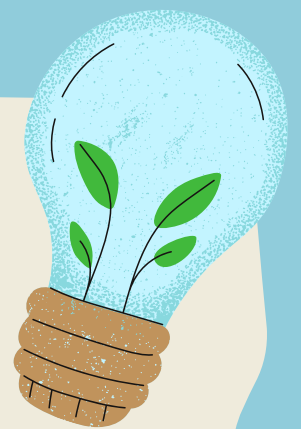

## A "species-less" future

Current species extinction rates are 1000x that of normal background extinctions rates, due to human impacts, and could climb 10,000x higher if we don't act boldy now.

## 85% of wetlands

globally have been lost due to human impacts and development. With its tragic effects felt by all..

## It all lies in nature

Nature-based solutions are found to be most effective in fighting against climate change, but they only receive 3% of all climate funding... Seriously, only 3%.

## Its time to act!

Start supporting companies and businesses that actively work towards improving the environment, rather than damaging it. Visit [yaupon.store](http://yaupon.store) to learn more
